ABOUT

Born in Casablanca and educated in the French school system, I hold a BSc (Hons) in Computer Science and work as a Junior Frontend Developer at Nokia, contributing to its Event-Driven Automation platform. Throughout my career, I've collaborated with development and QA teams across startups, mid-sized companies, and global enterprises, gaining experience in frontend product development, backend systems, and network-layer testing. I take initiative, enjoy solving complex technical challenges, and build scalable, user-focused solutions with a strong foundation in product development, automation, and networking.

SKILLS

- React
- JavaScript
- Java
- Wireshark
- NodeJS
- Angular
- Vue
- C++
- Python
- GitHub
- PostgreSQL
- Docker

LANGUAGES

- English (fluent)
- Arabic (native)
- French (native)
- Spanish (limited)

PROJECTS

Yosrart Gatineau Art School Website & Management Dashboard: Built the public website for Yosrart, a Gatineau art school, along with a management dashboard to support school operations and content administration.

Dog App (Winner): A web app for dog adoption and care, built with a public API during a technical interview. The winning project led to a job offer.

EDUCATION

BSc (Hons) in Computer Science

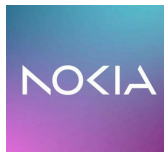

University of Ottawa

Ottawa, Ontario, Canada

September 2021 - December 2025

Achievements: Dean's List Merit 2025, 2026, Francophonie Scholarship Recipient

WORK EXPERIENCE

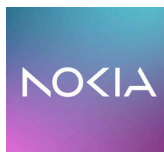

Jr. Frontend Developer (Event Driven Automation)

Nokia

Kanata, Ontario, Canada · Hybrid

2026 - Present

- Designed and delivered a production-critical GitLab-style Merge Request workflow, implementing complex conflict detection and resolution logic with an intuitive, responsive UI/UX for enterprise-scale data center automation.
- Develop frontend features and resolve complex product issues, improving platform reliability, usability, and real-time operational workflows.

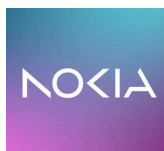

Deep Packet Inspection QA (coop)

Nokia

Kanata, Ontario, Canada · Hybrid

May 2025 - Aug 2025

- Performed traffic analysis using Linux CLI to validate application signatures and ensure precise classification
- Diagnosed misclassified traffic and filed critical DTS reports, improving detection accuracy
- Led full stack of Nokia's internal order tracking tool, proposing and delivering high-impact system improvements

Deep Packet Inspection QA (coop)

Nokia

Kanata, Ontario, Canada · Hybrid

Sep 2024 - Dec 2024

- Investigated routing anomalies via TShark and Linux CLI, supporting advanced network diagnostics
- Automated TCP sequence/ack misalignment fixes using Scapy, streamlining QA workflows
- Maintained backend and frontend of Nokia's internal order tracking system, improving usability and stability

Software Developer (coop)

Searidge Technologies

Ottawa, Ontario, Canada · Hybrid

Jan 2024 - Apr 2024

- Engineered backend services for real-time video streaming using Node.js and GStreamer (H.264 to WebRTC)
- Designed and implemented a complex Gantt chart in React and D3—now deployed at Hong Kong and JFK Airports for live operations management
